

The Thompson-Nicola Regional District (TNRD) offers a suite of weed control programs for landowners. These programs are designed to help residents protect their land values from the impacts of select invasive plants and noxious weeds.

Invasive plants occur outside their natural range and can have significant ecological, social and/or economic impacts once established.

Noxious weeds are non-native plants that have been introduced to BC without the insect predators and plant pathogens that help keep them in check in their native habitats. For this reason and because of their aggressive growth, these alien plants can be highly destructive, competitive and difficult to control.

**Regional Invasive plants include:**

Blueweed

Sulphur Cinquefoil

Orange Hawkweed

Burdock

Dalmatian Toadflax

Common Tansy

Field Scabious

Hoary Cress

Spotted & Diffuse  
Knapweed

Yellow Flag Iris

Spurges (Leafy,  
Myrtle, Cypress)

Hoary Alyssum

Hound's-Tongue
